

COLD CHAIN STANDARD OPERATING PROCEDURE

Ref: DCB/NMD/2026/0914 Page 1 of 1

Section 4.2 - Exposure and quarantine

Any vaccine pallet exposed to standing water, or to any excursion above 8 C for more than 60 minutes, must be quarantined and temperature-logged. Quarantined stock may not be released to service without written sign-off from the district cold chain officer.

Section 4.5 - Outage handling

During a mains failure the store must log ambient and pallet temperatures at 15-minute intervals and notify the district cold chain officer within 30 minutes of confirming the outage.

Section 4.7 - Reachability

The cold chain officer is considered unreachable only after two contact attempts at 20-minute intervals. In that case the duty pharmacist may authorise transfer to an approved alternate store, with retrospective sign-off within 24 hours.
